Illustrated on Opposite Page (Prepaid 600 Miles)

An amazing bargain, but these are NOT "bargain bulbs!"

They are imported by us from Holland, where they were grown by the most expert growers in the world.

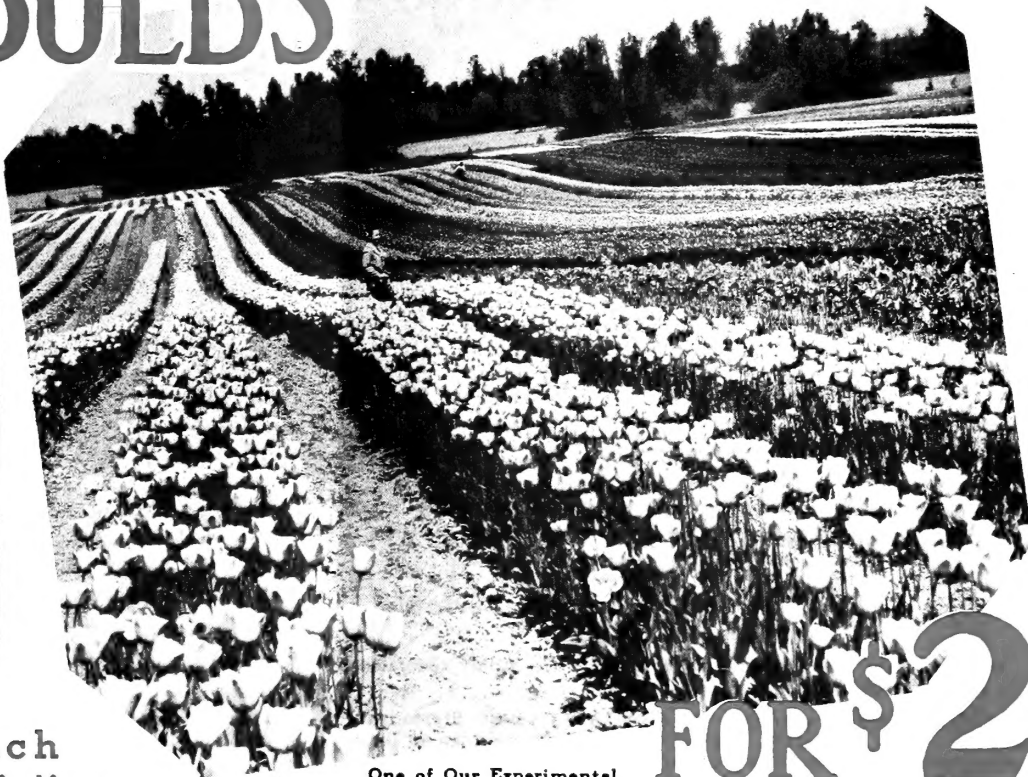

They were grown especially for this offer, which we are determined shall hold its place as the "biggest bulb value" in America.

Every variety is world famous, a leader in its color. All were grown in the display of tulips this spring at the New York world's fair, and are used in the beds and borders of the world's finest estate and park plantings.

You must have seen our Rainbow tulips in the garden of a neighbor, blossoming in May, when garden color is so scarce, yet so precious; painting the border in that lovely month with a brilliance which not even the June display could equal.

If your garden has lacked this early beauty (as two out of three do) a long first step toward remedying the lack can be taken at minimum expense, by planting one or more Rainbow Tulip Collections this fall.

These bulbs are of flowering size, and will produce giant blossoms, on tall, strong stems.

Tulip Plantings in Oregon.

SIX EACH OF THESE 10 VARIETIES
INGLESCOMBE YELLOW, 18 in., Cottage. A rich yellow flower which, though of the Cottage clan, has the cup-shape and is often called "the yellow Darwin."

MME. KRELAGE, 27 in., Darwin. A deep soft pink flower with paler edging, very large blossom, one of the earliest and loveliest Darwins.

FARNCOMBE SANDERS, 25 in., Darwin. A large flower of fiery scarlet, one of the most vivid tulips; white center marked with blue; perfectly cup-shaped.

GRENADIER, 20 in., Cottage. Magnificent light orange. When the sun shines on a fully developed flower of this variety the effect is dazzling.

PHILIPPE DE COMMINES, 26 in., Darwin. One of the finest violets, whose tall, dark beauty is most striking in company with pink or yellow companions.

REV. H. EWBANK, 20 in., Darwin. A deep lilac, which combines effectively with orange and yellow flowers, completing the color balance of a planting or bouquet.

PRIDE OF HAARLEM, 28 in., Darwin. An enormous flower of rosy red, long one of the most popular Darwins and as yet unsurpassed in its class.

CLARA BUTT, 20 in., Darwin. Considered by many the finest pink Darwin because of its soft, true-pink coloring, free from lavender; a rare color and a charming flower.

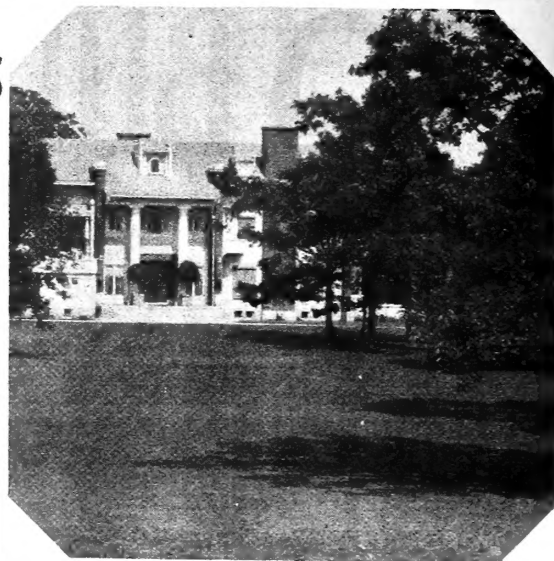

BARTIGON, 22 in., Darwin. A large flower of fiery crimson, which stands out in the tulip border. Its blossom is perfectly cup-shaped and its color while vivid is pleasing.

ORANGE KING, 23 in., Cottage. A fragrant flower of good size, and deep orange self-color, inside and out. It makes a strong color-accent.

AUTUMN is the most favorable time to sow lawn seed, the earlier the better. In the short days and cool nights the seedling plants make vigorous growth. Give them all the time possible to become established before freezing weather arrives.

It is more than ever important now to sow only permanent grasses, free from short-lived, coarse growing types. For a lawn of permanence and beauty, our famous Chicago Parks mixture is recommended, containing only fancy, re-cleaned seed of fine leaved, hardy, lasting grasses of high purity and germination. It contains no timothy, or other coarse adulterants. Remember, cheap mixtures invariably disappoint and increase rather than reduce expense.

We offer this mixture without Clover under the name "Fairway Mixture" at the same prices as Chicago Parks.

Vaughan's "Private Estate" Bent Formula FOR LAWNS "DE LUXE"

For those who are interested in bent grass we highly recommend our Private Estate formula.

In addition to Kentucky Blue Grass of the highest quality, to insure a foundation for your lawn, Private Estate formula includes an important proportion of bent, and produces a fine, heavy turf.

Price, 1 lb., 60c; 2 lbs., \$1.20; 3 lbs., \$1.75; 5 lbs., \$2.85; 10 lbs., \$5.50; 15 lbs., \$8.15; 20 lbs., \$10.75; 25 lbs., \$13.25; 100 lbs., \$50.00.

Vaughan's "Columbian"

When making a lawn on sandy soil or in light shade, conditions are met with which require the use of a special grass seed blend. Vaughan's "Columbian" is the correct blend for such locations.

Price, 1/2 lb., 35c; 1 lb., 55c; 2 lbs., \$1.10; 3 lbs., \$1.60; 5 lbs., \$2.60; 10 lbs., \$5.00; 15 lbs., \$7.40; 20 lbs., \$9.75; 25 lbs., \$12.00; 100 lbs., \$45.00.

Vaughan's Dense Shade Formula

Composed of grasses most suited for growing in heavily shaded situations. A splendid mixture. It is also satisfactory in light shade.

Vaughan's No. 25 Lawn Formula

An economy blend for new seedings and quick results which should be followed by reseeding with a more permanent blend like our "Chicago Parks." In spite of its low price, this blend does not contain timothy. Sow at the rate of 1 lb. to every 200 sq. ft. Begin cutting when grass is 3 to 4 inches high and continue to cut regularly to keep turf fine.

Price, 1 lb., 30c; 2 lbs., 60c; 3 lbs., 85c; 5 lbs., \$1.25; 10 lbs., \$2.40; 15 lbs., \$3.50; 20 lbs., \$4.60; 25 lbs., \$5.50; 100 lbs., \$20.00.

COLONIAL BENT GRASS makes a fine close turf of excellent color. Spreads from the roots. Seed 3 lbs. per 1000 sq. ft. Ask for prices.

SEASIDE CREEPING BENT GRASS. This is a true unmixed creeping Bent grass seed. One or two top dressings a year will keep it in good condition.

For \$16.00 we will send you enough runners and roots of the grass to plant 1,000 square feet. 500 sq. ft. for \$9.25; 250 sq. ft. for \$5.25. Express charges collect. If larger quantities are desired, ask for a special quotation. A leaflet about Creeping Bent Stolons will be sent upon request. Fall planting from the latter part of August to the latter part of September.

Tall, Giant Flowering Tulips

BED OF VAUGHAN'S CITY OF HAARLEM TULIPS LAST SPRING IN LILACIA PARK, LOMBARD, ILL.

ALL May-flowering tulips may be planted together harmoniously. Darwin, Cottage and Breeder tulips are merely different clans having distinctive family traits, but each with beauty which blends admirably with its cousins. They are listed separately for convenience of reference.

Red Darwins

Bartigon (22 in.) Large flowers of fiery crimson with bright scarlet margin. One of the best of its color. Doz., 65c; 100, \$4.50; 1,000 \$40.00. (Illustrated on Cover D.)

Burgemeester Sandberg. (28 in.) (Major Sandberg). Deep mahogany; blue base, starred white. Large flower, extra for bedding. Doz., \$1.00; 100, \$7.50; 1,000, \$70.00.

★City of Haarlem (27 in.) Here is a tulip we can recommend without hesitation. It can always be depended upon to make an excellent show, with its immense cups of cardinal red, shading to scarlet at edges of petals. The large, blue base circled with pure white enhances the beauty of this splendid variety. Doz., 85c; 100, \$6.50; 1,000, \$60.00. (Illustrated on Cover C.)

★Eclipse (27 in.) Rich, glowing dark red, with a blue base circled by white. A giant tulip of good form on a tall, strong stem, which does not easily snap in stormy weather, making it very good for garden and exhibition purposes. Really a royal tulip, which we highly recommend. Each, 20c; doz., \$1.90; 100, \$12.50.

★Eleanor Roosevelt (26 in.) Deep cochineal carmine, white and blue base. Good strong grower. Each, 25c; doz., \$2.25; 100, \$15.00.

★Farncombe Sanders (25 in.) Fiery rose scarlet, inside vivid cerise-scarlet with white center marked blue; flowers perfect shape. Doz., 70c; 100, \$4.75; 1,000, \$42.50. (Illustrated on Cover D.)

Feu Brilliant (25 in.) (Brilliant Fire). Glowing red, shading to brilliant scarlet near edges of petals. Large dark blue base with white halo. Really a nice tulip. Doz., 80c; 100, \$6.00; 1,000, \$55.00.

Darwin

Darwin tulips are characterized by a soft overtone which gives their colors a pastel effect. The flowers are cup-shaped and carried on tall, stiff stems. In color range they include all the rainbow hues, in amazing variety. Yellow, which long was missing from the Darwins, is now represented by several fine varieties; and new varieties include splendid giant whites.

Included in the variety lists on this and the following pages are many newly introduced varieties which show improvement in color, height, size or in some other important respect, over older varieties. But at the same time we retain the best of the old and tried varieties, many of which remain the finest of their type, and may never be surpassed.

Parcel Post. If you wish bulbs sent by parcel post, add to our prices, postage at zone rates from Chicago (see order blank), counting twelve bulbs as one pound, fifty as four pounds.

★Varieties starred thus are in our opinion of outstanding merit for garden planting.

250 Bulbs of Any Variety Will be Sold at 1,000 Rate.

Planning a tulip garden is made easy by the fact that you may count so surely upon the flower blooming as planned. The height, the color, the flowering season, are all so well established, it is a pleasure to plan a color effect and in the spring to see it develop in life, just as imagined the previous fall.

★Gloria Swanson (32 in.) An enormous rosy-red, becomes clear red with a faint blue tone on fading white center. We do not believe that a larger and stronger tulip in this color has ever been raised. Very strong stem, flower has great lasting qualities. This is really a giant and an excellent early forcing variety. Doz., \$1.00; 100, \$7.50; 1,000, \$70.00. (Illustrated on Cover E.)

★Imperator (30 in.) A giant blood-red flower with dark blue center, which is carried on a tall strong stem with extremely substantial flower-petals. Highly recommended. Each, 40c; doz., \$3.60; 100, \$26.00.

★Margaux (30 in.) Tremendous flower, deep wine red, broadly edged with lighter shade of wine red, blue base, and is carried on a strong stiff stem. It certainly is an excellent variety for exhibition purposes. Doz., \$1.35; 100, \$9.50; 1,000, \$90.00. (Illustrated on Front Cover.)

New-Orleans (30 in.) Very large, substantial flower, rich pansy merging into dark crimson dull and dark rosy magenta, indigo-blue, anthers black. A most unusual color. Doz., \$2.25; 100, \$15.00; 1,000, \$140.00.

★President Taft (27 in.) (Sealing Wax.) Deep crimson-maroon, a superb tulip for bedding and one of the most beautiful varieties for late forcing. The flowers are of good substance, large, and are carried on stiff stems. Highly recommended. Doz., \$1.00; 100, \$7.50; 1,000, \$70.00.

★Pride of Haarlem (28 in.) Vivid rose. An old standby that is deserving of a place in the best of gardens. Unsurpassable for fine color, reliable performance and enormous flower. Doz., 65c; 100, \$4.50; 1,000, \$40.00. (Illustrated on Cover D.)

Prince of Wales (28 in.) Bright cherry-red with a white base finely striped blue. Enormous flower on a tall, stiff stem. Doz., 75c; 100, \$5.50; 1,000, \$50.00.

★Prof. Rawenhoff (28 in.) Gorgeous deep rose red. Very attractive even under difficult conditions. Doz., 70c; 100, \$4.75; 1,000, \$42.50.

New Race of Triumph Tulips

NOT since the Darwin race was introduced, has so great an improvement been made in the tulip family, as in the new Triumph class. A hybrid of the Darwin and early singles, the Triumph tulips have a distinctive beauty of their own, and a clear luminous color quality which will make you treasure them. Two full weeks are added to the tall tulip season by planting these.

Cottage Tulips

GIANT TULIPS WILL PROVIDE VIVID COLOR EFFECTS IN FORMAL GARDENS.

COTTAGE tulips are inclined to have pointed petals, sometimes turned back, and the blossom to be smaller and more slender. But they harmonize perfectly with the Darwins and Breeders and supply a quality of clear, bright color which these lack. They blossom a few days later than the Darwins, often carrying the flowering period of Spring bulbs into the early days of June, especially if planted in a shady position. Light shade also lengthens stems. Many sweet-scented varieties are included, such as Gesneriana Lutea, and Mrs. Moon.

Breeder Tulips

BREEDER tulips are closer to the parent type of this ancient flower than others. The origin of the tulip is hidden in the dim past. But we know that the Dutch fanciers who in 1634 to 1637 speculated in new varieties during the reign of **TULIPOMANIA** grew the "mother bulbs," or Breeder Tulips, to produce new striped varieties by "breaking." The Darwin race is supposed to have developed from the Breeders. For a long time the dark rich colors of the latter were neglected in favor of the brighter and clearer tones of the other types. But recently taste has changed, and the richly hued Breeders have come into favor.

They blossom in May, and though some are not so tall, perhaps produce, as a rule, even larger blossoms than the Darwins. The colors include many rare among flowers—browns, bronzes, purples, blue-blacks, deep mauves, dull gold and dark lilac all exquisitely blended.

PLANTING. Plant the same as Darwins.

★Varieties starred thus are in our opinion of outstanding merit for garden planting.

INDIAN CHIEF

★**Louis XIV** (36 in.) Since it was introduced twenty years ago, this variety has been considered by many good judges to be the finest of all tulips. Others may match it in height, in size, or in rich coloring; but a rival which equals it in all these qualities is yet to appear. In the garden it is always magnificent, and as a cut flower its rich blend of purple and gold is truly royal. Offered by us in 1918 at \$13.00 a dozen, increased production has brought its price down to a minimum, but its beauty remains unchanged and unrivaled. Doz., 75c; 100, \$5.50; 1,000, \$50.00. (Illustrated Cover C.)

PARROT TULIP GLORIOSA

Striped Tulips

THOUGH too gay for modern taste to serve in large plantations, the old-fashioned striped tulips are beautiful. They prove that the Dutch tulipomania was not without excuse, and no gardener who wishes his collection to be representative will be without some specimens.

Bizarres Mixed. Flowers beautifully blotched, striped and feathered with crimson pink, scarlet, rose, lilac and purple on yellow ground. Doz., 80c; 100, \$6.00; 1,000, \$55.00.

Bybloemens Mixed. White ground, blotched, striped or feathered with lilac, purple, violet, blue. Doz., 80c; 100, \$6.00; 1,000, \$55.00.

Rembrandt Tulips are in reality "broken" forms of Darwin tulips. Broken tulips, on account of their odd colorings and variegations, were very popular at one time, and while the modern tendency to favor self-colors is recognized generally throughout all countries, these broken forms possess splendid decorative value. The stems average from 18 to 22 inches in height. Mixed. Doz., 80c; 100, \$6.00; 1,000, \$55.00.

Parrot Tulips

THEIR fringed and corrugated petals with their wonderful variation make these old-fashioned flowers the most curious of all tulips. Flowering at the same time as other late sorts; they are entirely distinct from any other; the flowers are thick-petaled with extra long stems, and keep extremely well after being cut. The average height is 15 inches.

Admiral de Constantinople Red, tipped orange. Doz., 75c; 100, \$5.50; 1,000, \$50.00.

***Fantasy** A remarkable Parrot Tulip with a straight, strong stem, a quality which has always been lacking in Parrot tulips. This variety is a sport of the well-known Darwin tulip, Clara Butt, and has the same clear pink color as its parent, combined with artistic form of a Parrot tulip. Each petal is over three inches long, and two inches across. The center of the petals on the outside are marked emerald green. Doz., 75c; 100, \$5.50; 1,000, \$50.00. (Illustrated on Cover F.)

Gemma Large white flowers slightly flushed apple-blossom pink. Flowers earlier than other Parrots. Doz., \$1.00; 100, \$7.50; 1,000, \$70.00.

Gloriosa Red and yellow. Doz., 75c; 100, \$5.50; 1,000, \$50.00.

Lady Derby Lovely violet and pink with lighter edge. White center, edged blue. Large strong flower and stem. Each, 20c; Doz., \$1.60; 100, \$11.00.

Lutea Major Bright yellow; large. Doz., 75c; 100, \$5.50; 1,000, \$50.00.

Mixed Superfine Doz., 70c; 100, \$5.00; 1,000, \$45.00.

Bunch Flowered Tulips

Monsieur Mottet A most charming and striking and very unusual scene is to see this tulip in full bloom. It is unusual, for it always produces not one, but three to six or more flowers from each bulb. The flowers are of Cottage form, narrow and pointed, and cream white in color. A very interesting and fine garden tulip. Doz., 75c; 100, \$5.50; 1,000, \$50.00.

Species Tulips

For the Rock Garden and Hardy Plant Border

The general characteristics of the various species, all of which are natives of Asia Minor and Central Asia, are bright colors and recurved petals. These Tulips do not always feel happy in their new surroundings and after two, or possibly three, seasons they will disappear. With care and the provision of suitable quarters they will flower quite satisfactorily. They feel best contented in rock gardens and borders.

Australis (Celsiana) Yellow, tinged on outside of petals reddish bronze, a pretty species somewhat resembling T. Sylvestris, is found growing in Spain and Southern Europe. Height 16 inches. Flowering in April. Doz., 80c; 100, \$6.00; 1,000, \$55.00.

Cornuta Stenopetala Beautifully formed flower, lacinated like a Parrot Tulip, but held upright on tall, stiff stem. Very interesting and curious in a collection. Color combination, scarlet and gold. Each, 20c; Doz., \$1.75; 100, \$12.00.

***Clusiana** "Lady" or "Candystick" Tulip. Outer petals bright cherry red, inner petals creamy white, with violet base; small flower, but very distinct. It should be planted in light soil 6 or 9 inches deep, in the rock garden or among stones in the front of the herbaceous border. A warm and sheltered situation should be chosen. Flowering season late April. Height, 8 inches. Doz., 75c; 100, \$5.50; 1,000, \$50.00.

Eichleri A grand Tulip from Turkestan; immense crimson-scarlet flowers with glistening black center marked with gold. Flowers at the same time the single early tulips do. Has very pointed petals. Height 11 inches. Doz., 75c; 100, \$5.50; 1,000, \$50.00.

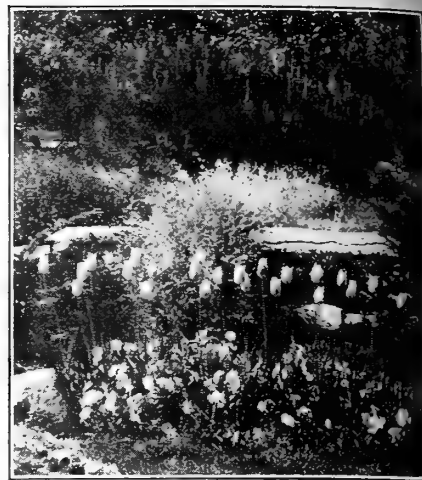

Florentina Odorata (Sylvestrus) Deliciously fragrant butter-yellow blossoms, often two to a stem, with bronze exteriors, carried on slender, arching stem. Increases rapidly when once established. Interplant with Grape Hyacinths. Height, 18 inches. Doz., 80c; 100, \$6.00; 1,000, \$50.00.

Fosteriana (Red Emperor) Fosteriana is a majestic tulip of great size; the dazzling scarlet flowers are borne upon stout stems, 18 inches and even as much as 24 inches high. Vermilion orange will perhaps best describe their intense and lovely color. Drainage must be perfect, and the sunniest place possible should be apportioned to it. It flowers in late April. Each, 35c; doz., \$3.50; 100, \$24.50.

Forsteriana (18 in.) Brilliant scarlet, yellow center. Each, 30c; Doz., \$3.00; 100, \$22.00.

Brilliant Garden Color Three Weeks Earlier from Single Early Tulips

TWO OR THREE weeks of brilliant color in April, following the daffodils and preceding the Darwin tulips, are worth much to any garden. The early tulips alone can supply it; and among them can be found varieties of delicate tints and shades, as beautiful and with flowers as large as anything the May-flowering classes can produce. In height, 12 inches is not uncommon, and a graceful carriage fits these taller kinds to serve in any role a Darwin would grace.

Explanatory. The number following the name of the variety denotes the height in inches, while the (a) and (b) indicate their earliness of bloom—the (a's) flower together and are earliest; the (b's) flower together, but are somewhat late.

★ Varieties starred thus are in our opinion of outstanding merit for garden planting.

Hyacinths

HYACINTHS are returning to favor in gardens. Blossoming with the early tulips, they contribute to the spring garden fragrance as well as colors which at that time no other flowers can give so well. Indeed, it is doubtful whether at any time of the garden year lovelier true pinks and blues can be found than those which hyacinths provide.

They serve to border paths, near all garden architecture, including ornaments such as bird baths, pools and fountains, and groups of hyacinths may well be worked into the border planting, where they will provide a needed color foil or accent.

For garden planting, it is not necessary to use the largest forcing sizes. Bulbs of third and bedding sizes will do well. Take especial care to plant them in well drained soil, and if there is any doubt, elevate the bed a few inches to keep them above water. Plant bulbs six inches deep, and after the ground has frozen a light mulch to keep the frost in, will benefit.

Dutch Roman or Miniature Hyacinths

These are small bulbs of the varieties listed in the first column on this page, and they are excellent for growing by amateurs in pots, pans, bowls or window boxes. They give flower spikes much larger than would be expected from their size, which is from 13 to 14 centimeters in circumference. Your selection of named varieties, chosen from the list in first column. Each, 10c; doz., 90c; 100, \$5.50.

Hyacinth Multiflora

As a result of a special cultural treatment in July by our Holland grower, Hyacinth bulbs can be grown which from a single bulb will produce 6 to 12 excellent flowers. The flower spikes are not as heavy as the regular Dutch Hyacinth. They resemble the French Roman Hyacinths, are very fragrant and are beautiful as a pot plant.

We offer these in four colors, red, white, blue, rose-pink. Each, 45c; doz., \$4.75.

HYACINTH MULTIFLORA

Hyacinths in Glasses

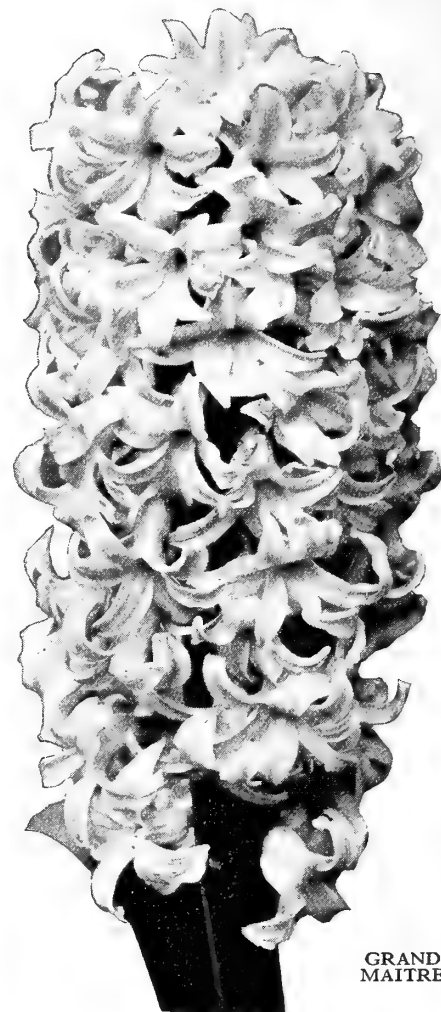

Fill the glass with clear, soft water, so as to nearly touch the base of the bulb, putting a small piece of charcoal in each glass to keep the water pure and sweet. The filled glass should be placed in a dry, cool, dark place, and kept there until the roots almost touch the bottom of the glass, when they may be given more heat, and gradually exposed to the light. Water must never be changed, but only be replenished. Large bulbs are best for this purpose.

Hyacinth Glass

Not responsible for breakage in transit

For growing hyacinth bulbs in water. In four colors: green, blue, amber, and crystal. Each, 40c; doz., \$4.00.

GRAND MAITRE

French-Roman Hyacinths

The white variety, if planted early in September and slowly forced, will bloom in December. The others require from two to three weeks longer. They will flower in three months.

Blue, per doz., 95c; per 100, \$6.00.
Light Pink, per doz., \$1.10; per 100, \$7.00.
White, select size, per doz. \$1.85; per 100, \$12.00.

DUTCH ROMAN HYACINTHS
FORCED IN FIBRE

Hyacinths in Pots

For Winter Blooming

LIGHT, rich soil produces the best flowers. Place each bulb one inch deep, an inch and one-half from each other bulb or edge of pot. Water well, and set away in a dark, cool cellar, or an outdoor pit which is well drained. If outside, cover with three or four inches of sand or ashes. Let them remain there for eight or ten weeks to root, then bring them into a warm room, but keep them in the dark (cover the pot with a paper bag, cloth, etc.). Then when the flower spike is three or four inches out of the bulb, they may be exposed to the light, and will open beautifully. The largest bulbs are best for indoor growing. French-Roman Hyacinths in pots flower earlier than the others.

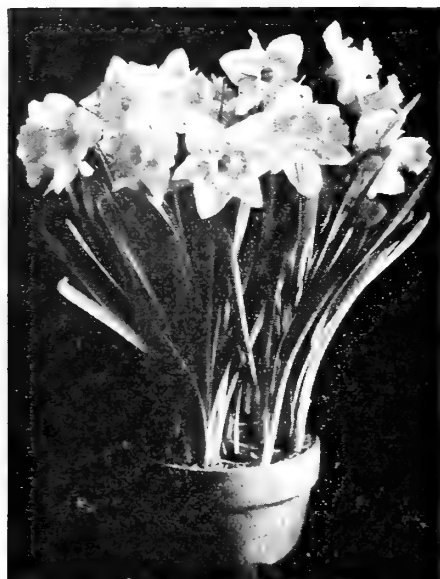

Exhibition Hyacinths (Mammoth Bulbs)

These are the bulbs 19 centimeters and over listed in the first column on this page. They are not recommended for outdoor planting but should be used for forcing in glasses, or in pots or pans. We have arranged with one of our Dutch growers to select these bulbs for their ability to give huge spikes of flowers, suitable for flower shows, or for striking decorative effects.

A succession of decorative flowers can be produced with exceptional ease and certainty by starting mammoth hyacinths to grow in glasses at intervals of two weeks.

250 Bulbs will be sold at the 1,000 rate

Vaughan's Paper White Narcissi

KING ALFRED

Forcing Daffodils

DAFFODILS are excellent subjects for indoor growing in bulb pans in soil or fibre. These require more skill in growing than do Paper White Narcissi. Success depends on the extent to which fine roots are developed before the pots are brought to the light. These roots develop best when the pots are about fifteen degrees above freezing. A pit in the garden which is protected from surface water, so it will not fill, is an excellent place to store the bulbs. The pots may be covered with leaves, straw, or even with ashes or sand; and brought in after eight weeks, when it is desired to begin forcing them. Figure on not less than five months before flowers are produced. After being brought into the house, a temperature of 60 degrees is sufficient until the formation of buds begins, and the best flowers will then be formed in a temperature of 68 degrees. All the light possible should be given after top growth begins. King Alfred is easiest to grow.

Emperor. The entire flower is a rich yellow trumpet of immense size and petals so broad that they overlap. Three of these bulbs planted in a 6-inch pot will make a splendid show. Each, 15c; doz., \$1.20; 100, \$8.00.

King Alfred. "The King of Yellow Daffodils." Tall, vigorous, golden yellow flower, of elegant form. The expanded trumpet measures 2½ inches in diameter, the perianth proportionately large and segments gracefully twisted. Each, 15c; doz., \$1.45; 100, \$9.50.

Spring Glory. A very early showy bicolor daffodil with large white perianth, broad and spreading, trumpet large and handsome, bright yellow with open frilled mouth. Each, 15c; doz., \$1.20; 100, \$8.00. (Illustrated on Back Cover.)

Tresserve. A flower very large with slightly campanulate canary-yellow perianth and a very bold rich yellow trumpet with wide expanded brim deeply flanged and measuring 2¼ inches across. Each, 15c; doz., \$1.30; 100, \$8.75. (Illustrated on Back Cover.)

Cheerfulness. The double Elvira, a very pleasing double white Poetaz, good stems, a fine garden and show flower. Each, 15c; doz., \$1.25; 100, \$8.50.

Laurens Koster. Perianth white, cup light orange-yellow. Each, 15c; doz., \$1.40; 100, \$9.00.

Orange Cup. Yellow perianth, cup orange red nicely frilled. Each, 15c; doz., \$1.50; 100, \$10.00.

Twink. It is a double of the semi-filly type, the petals alternating a soft primrose and clear orange, so arranged as to give the flower a most attractive appearance. Each, 25c; doz., \$2.40; 100, \$15.00. (Illustrated on Back Cover.)

Best of all Bulbs to Grow in Pebbles and Water

Their culture is simple, and with good strong bulbs such as we supply, flowering is sure. Plant bulbs in shallow bowls filled with pebbles, or fibre, and water. Keep in the dark until roots form (about 2 weeks) then bring into light. A day temperature of not over 70° is best.

Chinese Sacred Lily (Narcissus)

THIS narcissus is called by the Chinese the "Joss Flower" or "Flower of the Gods," and "Water Fairy Flower." It is highly prized for the abundance of its flowers and its marvelously rapid growth. The flowers are white, with yellow cup, and very fragrant. Each bulb produces several flower-spikes. In China and Japan the bulbs are grown in the living rooms in fancy bowls filled simply with pebbles and water. Place in a sunny window by day and on a table near the center of the room by night, as frost destroys the flower buds. Care should be taken that it is not placed in a draft, as this may cause non-flowering. Recommended for Christmas flowering.

Large Bulbs. Each, 10c; three for 25c; per dozen, \$1.00; 100, \$7.00.

Lilies of the Valley

(Illustrated in Color on Cover Page G.)

THESE beautiful, fragrant flowers may be brought to flower in 18 to 21 days, if pips from cold storage are used. They are easily forced in a bowl, if planted in sphagnum moss and kept well watered. Their dainty fragrance is preferred by many to the large Paper White Narcissi, and they are much quicker to flower. Do not order more than you intend to use at once as the cold storage pips will not keep. Plant about 25 pips in a 7-inch bowl, place in a warm temperature, 65 degrees Fahrenheit and shade from light until leaves and spikes are well developed, then admit light gradually. Increase temperature to 75 degrees or 80 degrees if possible. An inverted pot over each bowl answers admirably to shade them. They may be forced in soil the same way, in a 7-inch pot or pan. This is the treatment for cold storage pips only.

COLD STORAGE PIPS, (Ready November 1). 25 for \$2.00; 100 for \$7.50, postpaid.

SPHAGNUM MOSS, sufficient for 25 pips, 10c, postpaid.

A Winter Window Garden

18 Bulbs Including Six Different Subjects With \$1.50

Vaughan's Prepared Bulb Fibre. Prepaid 300 Miles

INCLUDED IN THIS OFFER

3 Single Early Red Tulips.
3 Mammoth Paper White Narcissus bulbs, 14 ctms.
3 Yellow Paper Whites (Grand Soleil D'Or) mammoth bulbs.

2 Chinese Sacred Lilies, mammoth bulbs.
6 Giant Freesias, "White Chief."
1 Calla Lily bulb, first size.
2 Pounds of Vaughan's Prepared Bulb Fibre.

Most of you know how easy it is to force into flower the beautiful, fragrant, Paper White Narcissi, in bowls of water. By using Vaughan's prepared bulb fibre in place of pebbles, the variety of bulbs that can be forced is widely increased.

METHOD OF FORCING BULBS IN FIBRE. Moisten Vaughan's Prepared Bulb Fibre to saturation, fill the bowl with wet fibre, and plant the bulbs allowing their necks to emerge from the fibre, but without pressing the fibre too firmly around them. Place the bowl in a cool, airy place where the light is dim or dark, and preferably the temperature does not rise above 55 degrees. Keep the fibre moist, since if it dries out the flower buds may go blind. But water sparingly until good roots have formed. When strong top growth has been made in the dark, take the bowl to a sunny window, where it will have fresh air, all the sunlight possible especially in the morning, and preferably a temperature not less than 55 nor more than 70 degrees.

Complete Directions for Planting and Forcing All These Subjects Are Included.

Giant Amaryllis

(Illustrated in Color on Cover Page G.)

OF ALL bulbs which the amateur can grow successfully indoors, the Amaryllis is the largest, most beautiful, surest to flower and most easily handled. Our new hybrids, especially, are so gorgeous in size and coloring as to amaze those not familiar with them. From a single stem, spring from one to three lily-like flowers, six to eight inches in diameter.

Place only one bulb in each pot, covering it as far as the neck or upper narrow part. Water sparingly at first until the flower shoots begin to appear. Some growers keep them in the dark until the flower stems are four or five inches long, and then bring to light.

After flowering they should be placed in a warm window, or set outside in sand or cinders and watered every day (sometimes twice a day), until the end of August when water should be gradually withheld and the bulbs allowed to go to rest. In the fall they can be forced again as with new bulbs.

Vaughan's New Hybrids. One of the finest strains of amaryllis we have seen. Bulbs are two-inch and up in diameter. We can supply in separate colors in the following shades: Each, 65c; doz., \$6.50,

CAMASSIA

Camassias are attractive garden plants with which the average amateur is not familiar, but which can be grown readily enough in any garden, and which may be associated particularly well with tulips. The bulbs should be planted at this season. They should go four inches underground, and be spaced about five inches apart. A little clump of camassias blooming in May will add much to the beauty of the garden, and will certainly prove a novelty. The flowers are starlike in appearance, and borne on long spikes, the colors being lavender, purple or white. The purple species, called *Camassia Esculenta*, is particularly good.

Leichtlini. A California species, comes in deep blue and white. Either color, each, 10c; doz., \$1.00; 100, \$7.00.

DOG TOOTH VIOLETS (Erythroniums)

If they had no other beauty than that of their richly mottled leaves, they would be well worth a place in the shady corner. Their flowers are 3 inches across, with stems 6 to 18 inches high. The colors run in delicate tints of white, pink, cream, bright yellow and rose. They are hardy in the coldest parts of the United States, and while they are at their best in a loose, gritty soil, rich in leaf mold, they also thrive in the greatest variety of clays, grits and rocky soils. In woodlands, in shaded corners, or in the crevices of rockwork in shade, is the place to naturalize them.

Americanum. It produces in April, small, lily-like flowers, which vary through white, pink, bright yellow, rose, and cream. The beauty of the flowers is greatly enhanced by the richly mottled leaves. They like a light, rather moist, well-drained soil. The bulbs should be planted about 5 inches deep. Doz., 75c; 100, \$5.00; 1000, \$45.00.

Grandiflorum Robustum is a superb species with flowers of the brightest buttercup yellow. The leaves have no mottling—just plain green. It always attracts attention. Doz., \$1.00; 100, \$7.00; 1000, \$65.00.

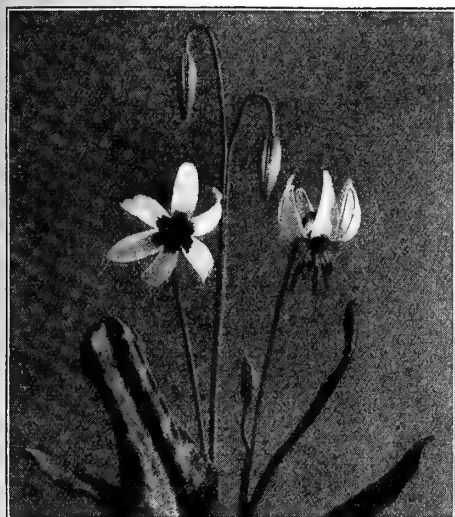

Hartweggii is as pretty as *Californicum*, with more yellow in the flower, and each flower on a separate stalk. Very early and stands much heat. Good for pots. Large bulbs. Doz., 80c; 100, \$5.50; 1000, \$50.00.

Hendersonii. Like *Californicum*, but the flowers are a lovely light purple, with centers a deep maroon, almost black. Most striking. Doz., 80c; 100, \$5.50; 1000, \$50.00.

Early in Spring the golden blossoms of Winter Aconite look charming, resting on an emerald-green cushion of leaves, forming a striking contrast to the Snowdrop, Scilla and Chionodoxa. GRAPE HYACINTHS (Muscari)

Muscari, or Grape Hyacinths, are a race of spring-flowering bulbous plants which have long been grown in British gardens. They are not showy when only a few are seen together, but a drift of them presents a picture of considerable beauty, especially if growing in grass, for which purpose they are well adapted. The species also look charming in clumps in the rock garden or border, and the Feather Hyacinth (*M. plumosum*), in particular, may be employed, with great gain, in pots in the cold greenhouse. In fact, pot culture gives this Grape Hyacinth such delicate and uncommon coloring, that it might well be grown anywhere under glass. All are very accommodating in their requirements, but prefer a good loam with a little old manure dug into it, and, in the case of the Feather Hyacinth alluded to, a rather warmer position. The bulbs should be planted during autumn at a depth of about three inches and about two inches apart.

Blue. Pretty little spikes of dark blue flowers; an old garden favorite, used largely for small beds, edging, etc. Doz., 35c; 100, \$2.50; 1,000, \$20.00.

RESURRECTION LILY

(*Amaryllis Hallii*) (*Lycoris Squamigera*)
For Outdoor Planting

Produces in early spring attractive green foliage which grows until May when it ripens off and disappears, and one not familiar with its habits would think the bulb had died, but about a month later as if by magic, the flower stalks spring from the ground to a height of two or three feet, developing an umbel of large and beautiful lily-shaped flowers three to four inches across and from eight to twelve in number, of a delicate lilac-pink shaded with clear blue.

Daffodils or Narcissi

12 Daffodils for Naturalizing, 85c

12 Bulbs, 85c; 100 Bulbs \$5.50; 1,000 Bulbs, \$50.00, Prepaid.

DAFFODILS are the first major flowers to bloom in the spring. By nature they are informal flowers, and look best when grown in drifts, in the shrubbery or under trees. They like to nestle among the roots of shrubs, and as they bloom before the leaves develop, they thrive in places which later in the season are well shaded. Our naturalizing mixture is an exceptional value, containing many of the best named Trumpet, Leedsii, Star and Poeticus varieties. Plant them and do not disturb until they crowd; the bulbs may then be lifted and replanted over a much larger area. A purchase of bulbs is an investment which will pay in bloom for a lifetime.

WARWICK (Trumpet)

NARCISSI NATURALIZED IN THE WOODLAND

DAFFODILS are the first of the major garden flowers to blossom in the spring. This makes them doubly precious, as heralds of a season of joy, after the long winter.

Great advancement has been made in breeding new varieties, many of which we offer this year.

Culture of the Daffodil

The daffodil tribe likes a cool root run and its flowers are at their best in the cooler days of spring. Therefore it is essential to dig the soil deeply and provide humus. Like the tulip, the daffodil will not thrive if there is fresh manure in the soil and bone meal alone should be used as a fertilizer when the bulb is planted. It likes a moist soil but it must have excellent drainage. The bone meal should be mixed in the soil below the bulb and if the soil is heavy, a cushion of sand is advisable.

Where to Plant Them

Daffodils are particularly fine subjects to plant under the edge of bushes or among perennials in the hardy border as they seem to like to nestle among the roots of their neighbors. A clump of golden trumpets peeping from beneath the overhanging branches of Spiraea Van Houttei or nestling in a sheltered angle of a building are one of the gladdest sights of early spring.

A few bulbs can be tucked into odd corners all about the garden and they will repay mightily when the first sunny days of spring bring their sturdy shoots breaking through the earth.

Daffodils and narcissus need not be moved for several years if they are flourishing, in fact not until the clump becomes so large that it is evident it needs to be divided and they should be replanted at once.

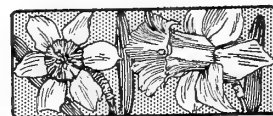

Types of Daffodils Defined

The Royal Horticultural Society of England divides the narcissus family into eleven sections and these with subdivisions to make it possible to classify the hundreds of new varieties appearing each year. As now accepted the important garden classes are as follows:

1, Trumpet, with trumpet as long as perianth segment; 2, Incomparabilis, cup not less than one-third but less than equal to perianth segment; 3, Barri, cup less than one-third perianth segment; 4, Leedsii, perianth white and cup white, cream or citron, of sizes found in Barri and Incomparabilis; 8, Tazetta and Tazetta hybrids, including bunch-flowered and poetaz types; 9, Poeticus varieties.

Hardy Bulbous Iris You Can Grow in the Garden

ADMIRERS of the iris will find this group to be valuable additions to their collections. Flowering in late June and early July, they follow the bearded and Siberian irises, prolonging the display and producing flowers of a distinct type and quality of coloring. The colors are clear and brilliant, and the petals are delicate, but of excellent substance. They make quality cut flowers, lasting fully a week in water.

The Dutch iris have displaced the Spanish iris, from which they were developed. Both they and the English iris are successfully grown in localities which have sub-zero temperatures in the winter. In the cold winter states they should have the protection of a heavy mulch, applied after the ground has frozen and should be planted in a location where spring growth is not unduly stimulated, so they will not get a premature start, and suffer injury from belated frosts.

Bulbs should be dug each year after foliage has turned brown. They should be cured quickly in a dry location, and only the largest bulbs should be replanted for flowering. The smaller bulbs can be grown in a nursery row until they reach flowering size. The increase is rapid and bulbs which are not lifted will crowd and stop flowering.

ENGLISH IRIS

These magnificent bulbous Irises thrive in any ordinary garden soil but prefer a good loam. The earlier the planting, after beginning of September, the greater the success; the bulbs should be planted 4 inches deep. The varieties we have especially selected as being the very finest and most distinct in cultivation, and they will be found as strikingly beautiful in color as many of the sumptuous orchids. They flower from end of June to beginning of July thus succeeding the Bearded Flag Irises, Early Xiphium and Spanish Irises. As cut flowers they take a first place.

IRIS TINGITANA WEDGEWOOD

For indoor use and protected plantings only. A seedling of the old favorite *Tingitana* that is just as early, but a much more reliable bloomer. The small cultivator will do better to plant his bulbs, six or eight according to size, in a seven- or eight-inch pot, rather than in ordinary shallow boxes. Not only are bulbous irises deep rooting but they are very sensitive to root injury. If after boxing, they are stood on the ground or on ash-covered beds and root through at the bottom, it is hindered to one that half of them will come blind if the boxes are disturbed. In deep pots the roots are less likely to root through at the bottom, and treated rightly in other ways, they will flower 100 per cent. They must be kept cool, 45 degrees or so, until the buds are out of the neck. A great cut flower. Light blue in color. 8-9 cms. for outdoor planting. Doz., 60c; 100, \$4.00; 1000, \$35.00. 10 cms. up for indoor growing, doz., \$1.30; 100, \$9.00; 1000, \$85.00.

DUTCH IRIS

They resemble the Spanish Iris, but their habit of growth is more vigorous, the flowers larger, with conspicuous orange blotches on the wide falls. Buds open at least two weeks before the Spanish Iris, and immediately after the last of the May flowering tulips are gone. Through untiring years of hybridization, they not only surpass the Spanish Iris in size and sturdiness of growth, but also in brilliancy of color.

IRIS RETICULATA

Fragrant Iris—Hardy with Protection

RETICULATA. This lovely species is one of the treasures of the garden or rock garden. It can best be described as a small form of the Spanish or Dutch Iris. Its main value lies in the fact that it may be forced into bloom in the house with the greatest ease. Six or eight bulbs put into a 4 or 5-inch pot when received will bloom about Christmas time. The fragrant blossoms remind one of a bunch of fresh violets. Perfectly hardy with reasonable protection. It is one of the loveliest early flowering bulbs for the rockery. To show it off well, plant a number of bulbs under the white *Arabis Alpina*; you'll enjoy the results more than we can tell you. Each, 15c; doz., \$1.30; 100, \$9.00.

The Hardy Lilies

LILIUM AURATUM PLATYPHYLLUM

Many imported lily bulbs arrive in this country very late in the fall. Note carefully the arrival dates stated below. If freezing threatens before your bulbs arrive, cover the soil with a heavy mulch to keep it soft.

LILIES are so beautiful, so fragrant, we are likely to think them too fine for the amateur to grow. But many are hardy, thrifty flowers, capable of surviving conditions which would overcome flowers much less beautiful. Grow them in the border in small groups, with background, where their beauty has a suitable setting for its display. They blossom, as a rule, in midsummer, when fine flowers are at a premium.

Lilies Arrive from Japan in November

Most Lily Bulbs, being of late maturity, are not ready before October and late November (the best time to plant them). Where the ground is liable to freeze up before the late lilies arrive, it should be mulched with six or eight inches of leaves or straw so the bulbs may be planted on arrival.

Outdoor Culture—When planting lilies out-of-doors, see that they have a well drained position, and where they will be shaded from very hot sun. Such places can usually be found around the shrub borders, and in the hardy plant border. Never mix manure in the soil around lilies, but enrich with a standard commercial plant food or with bone meal. Many varieties are termed "stemrooters," that is, they develop roots on the stem up to two or three inches from the ground. These roots are voracious feeders, and on them depend greatly the number and size of flowers. When they appear, the plant should receive a top-dressing of good rich soil on which they can feed freely. Spade over the ground thoroughly to a depth of 18 inches before planting lilies. Plant the bulbs 4 to 6 inches deep, depending on their size and the soil, deeper in light soil. Put some sand under and around the bulbs, and after covering protect with six or eight inches of leaves or other litter, which must be removed in late spring.

Indoor Culture—Lilies should be potted immediately upon receipt, if intended for growing in pots or for forcing. In potting use a compost of fibrous loam and sweet decomposed leaf soil, with plenty of coarse sand or a mixture of good peat, loam, and sand, adding to the compost a few pieces of charcoal. See that the pot is well drained. The bulb should be set about half-way down in the pot and barely covered with soil, thus leaving room to top-dress and fill the pot with more soil when stem-roots appear above the bulb. After potting, give a thorough watering and set outside in a cold frame or shady situation, then cover with ashes or long straw. After they have stood from three weeks to a month and thoroughly rooted, bring inside, in a temperature of about 66°; let the plants grow slowly under a bench or some other suitable place until about 6 inches high; then place on

top of the bench in full light. An occasional application of liquid cow manure, starting about six weeks before flowering time, will stimulate the plant wonderfully. Thorough rooting is essential.

Lilium Auratum

Ready Late November. Bulbs supplied by us are treated with special disinfectant which prevents decay.

The Gold-Banded Lily of Japan—The most beautiful variety of all the lily family—should be in every garden. Flowers white, dotted crimson, with a clear golden band running through the center of each petal; very fragrant. When grown in the open, prefers a position where it is somewhat shaded for part of the day, preferably during the afternoon. The position should be well drained and set up rotting. loamy soil to a depth of 2 feet, and the bulbs planted with their base 7 inches from the surface, a little clean sand being placed beneath and around each bulb. When the buds are commencing to spread from the stem a light stimulant may be applied at intervals of 10 days if the weather is dry, and a light mulch placed over their roots. After flowering, but not until the leaves begin to yellow, the old flower-stems may be bent over at half their height. It is more satisfactory than cutting them off, as this treatment leaves a funnel-like stem to carry water into the heart of the plant and set up rotting. During the winter months the bulbs require no attention whatever. *L. auratum* and its forms are really woodland Lilies, and there is no better place in which to grow them than a thin wood composed of summer-leaving trees; such conditions should be copied as far as possible when a site is being chosen in the garden. They do, nevertheless, succeed in beds and borders where their station has been well prepared.

Height 5-6 feet. Late August flowering. Plant 10 inches deep in sandy, lime-free loam with a liberal addition of decayed leaf-mould. This lily is bright red in color, the central portion being a bright yellow with dark spots. Stems are straight and strong with no tendency to droop. Not particular as to soil, it will thrive in full sun or partial shade, and while it appreciates good drainage, a liberal amount of water during the growing season pays good dividends in larger blossoms and greater height. July flowering.

LILIAM HANSONII

Hardy Perennial Plants for Fall Planting

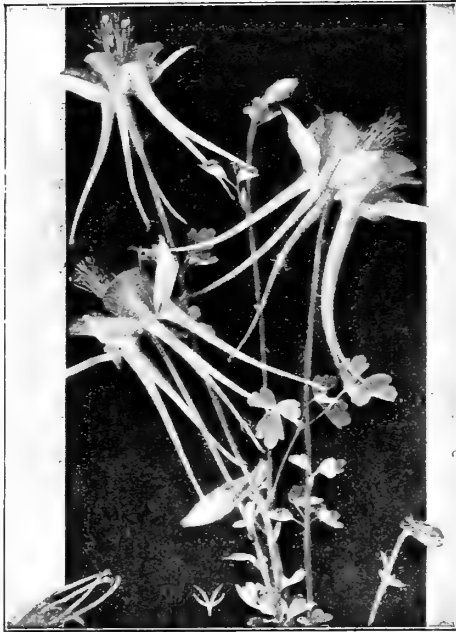

HARDY perennials may be set out this fall in time to become well established before winter sets in; and next year will see them better developed, and bearing finer flowers than can be obtained from plants set in your border next spring.

This advantage is accompanied with very little extra risk. We do not list the kinds which need special protection through the winter. It is always well to apply a mulch over newly planted perennials, after the ground has frozen. This will tend to prevent winter thaws and frost heaving. Plants should not be placed where water

stands, as excessive dampness in the winter causes rot during mild spells.

All plants are F. O. B., Chicago.

Plants are shipped with their roots well wrapped; and as packages must go by parcel post or express, it is impossible to make prices which cover postage, and are fair alike to all customers. So all prices in our plant list are F. O. B. Chicago, and if it is desired to have them sent by mail, postage should be added at zone rates. If sent by express, they go collect, at customer's expense.

Annual Flower Seeds for Fall Sowing

WHEN you sow seeds of annuals in Fall, you imitate Nature's method. Practically all hardy annuals will produce stronger, sturdier plants with earlier bloom by this method. Even when spring sowing is desirable, experienced gardeners also sow in fall because they then have a continuous season of bloom. Also, they can sow at their leisure instead of trying to plant everything in a few short weeks. Do not be in too much of a hurry to sow. The ideal time is just before the ground freezes for the winter. November 15th is early enough in normal seasons in the vicinity of Chicago and New York. If the ground has been prepared in advance, sowings can also be made during winter thaws.

A fine seed bed is desirable. No covering of any kind is needed unless there is danger of washing or from birds, in which case a light, loose covering of evergreen boughs can be used. Plant at half the depth used when sowing seed in spring. Broadcast all small seed. South of the Mason-Dixie line, sowing should be delayed until the late February and early March thaws.

Pansies and Violas must be sown as early as September 1st, but should then be protected with straw or glass sash during the winter.

How to Sow Pansy Seeds

Sow the seeds in a cold frame in light soil without any fertilizer. Cover the seeds very lightly with the same soil and keep moist. Shade the seed bed with cheesecloth or a muslin screen, and as soon as all the plants are up remove the screen. Or you may sow them in a large pot or seed pan.

To be certain of fine, strong Pansy plants, we suggest the following, applying as a top-dressing by the end of March or early April:

2 parts dried blood

2 parts steamed bone meal

1 part potash

FALL SOWING OF PERENNIAL SEEDS

Perennial seeds may be sown in the fall in flats or in well prepared seed beds, elevated above the surrounding surface and protected with a wooden curb, or in cold frames. Like annuals so treated, they will germinate early in the spring before the ground could be prepared for spring sowing. After the ground is frozen, the seed bed should be covered with a mulch to keep the frost in and prevent heaving. This treatment is especially good for slow germinating subjects.

- 3880 **Vaughan's International Pansy Mixture**. A mixture of special strains such as Bugnot, Masterpiece, Swiss Giants, Maple Leaf Giants and Mammoth Exhibition. Flowers of largest size and great substance in the most varied colors and color combinations. $\frac{1}{8}$ oz., \$1.10; 3 pkts. for 65c; pkt. (250 seeds), for 25c.

- 8171A **Russell Re-selected**. These remarkable lupins are the result of the continuous labor of many years. The spikes of bloom are often $3\frac{1}{2}$ feet and more in length. Flowers are fan-shaped, the standard being expanded like that of a Sweet Pea. The coloring has an enormous range and unique character. Gold Medal award by the R.H.S. As soon as German iris plants are received, plant them in a sunny, well drained place. Each plant should have at least eighteen inches clear space from other irises, as it will grow in a circle and many varieties spread rapidly. The rhizome, or fleshy root, stock from which the leaves and roots grow, should be barely covered with soil, with the roots properly spread below, and the soil well firmed about them. Until the plant is established, give it frequent attention, watering in dry spells. In the first winter, after the ground has frozen, a light mulch to prevent thawing and heaving will be beneficial.

FRANCES WILLARD

Vaughan's Peonies

PEAONIES, especially the modern introductions, are probably the most valuable, and most beloved of all perennial plants. Planted in sun or semi-shade in single clumps or long beds; or bordering lawns, shrub rows, and drives, they give a grand display of large fragrant blossoms of brilliant colors during June, followed by their exquisite foliage which is very ornamental during summer months. They are also most effective for home and table decorations, and last longer in water than many other perennials. Avoid buying cheap Peonies; they require just as much care as the better kinds, and are disappointing in the end.

Planting. Peonies may be planted from September first until May. Orders should be sent in at once so that we can forward when weather permits. Avoid planting too deeply, as this is often the cause of shy blooming, 2 or 3 inches of soil over the crown (eyes) being sufficient. We offer Divided roots, natural divisions, having 3 to 5 eyes of blooming size.

The figures following the varieties are the rating given to them by the American Peony Society, based on a scale giving 10 points for perfection.

Feeding. Peonies in established plantings need to be fed each Spring. A top dressing of Vaughan's Balanced Ration (5-8-7) well worked in will do wonders, but it should be applied early.

Roots by Parcel Post.—If to be sent by parcel post, add postage as follows: Single roots, 8c; two roots, 12c; 3 roots, 16c.

★Varieties indicated by star are of outstanding merit and are especially recommended by us for garden planting.

We list on this page plants which have been found useful for planting in hedge rows. HELPFUL DETAILS MAKING MAIL ORDERS CONVENIENT

Order at Once Send in your order as soon as possible after receiving catalog. Bulbs for immediate planting will be sent at once, others at proper time, with due notification.

How to Order Use the order sheet accompanying this catalog. One section is for seeds, bulbs and sundries (i. e. Insecticides, Manures, Poultry Supplies, etc.); the other for plants, shrubs and trees only.

Don't put plants and trees on the same section with bulbs and seeds.

Important Write your name, postoffice, state and express office plainly with black ink, on every order, and every time you write to us give plain express, mail or freight directions; where none are given, we route at buyers' risk.

Quantity, Size, Price Always give the quantity required of bulbs, plants or trees, mentioning size where different sizes are offered, and carry out the price of each item.

Mistakes These will happen in spite of all care. Write us at once with copy of original order if possible, and mistakes will be promptly rectified. Please do not return goods until you hear from us.

Parcel Post Fourth Class Mail Matter, which includes seeds, plants, bulbs, roots, books, tools, insecticides (in dry and paste form), odorless fertilizers and requisites, may be forwarded by domestic parcel post within the United States. See table opposite showing postage you should add to insure free delivery. All poisonous Insecticides, are unavailable.

Express Service For most orders exceeding 20 pounds in weight and for plants requiring special packing, we urge they be expressed. Mark order plainly if wanted by Express or Parcel Post.

Our Terms with customers not having an account are strictly cash with order. We make no C. O. D. shipments unless one-third of amount is paid in cash with order. No trees, plants or other perishable stock, are sent C. O. D.

How to Send Money Send by New York or Chicago draft, registered letters, or postoffice or express money order; both are cheap and absolutely safe. Small postage stamps are taken as cash, but we prefer larger denominations, such as fives, tens or fifteens. Registered letters can be sent from any postoffice, and your receipt sent you by return mail if demanded. If personal checks are used have them certified and add 15 cents for exchange cost. Put no currency in letter unless you register it. Make money order payable to "Vaughan's Seed Store."

Our Responsibility It is so manifestly impossible for a seller of any perishable article to be responsible for what may happen to it after it leaves his hands, especially one like seeds, which are planted in the ground under varying conditions of soil and climate, that we, in common with all American seed houses, disclaim responsibility as to the crop which may be raised from seeds which we sell.

At the same time, in case of any failure to secure proper results caused from some inherent fault in the seeds themselves, Vaughan's Seed Store accepts responsibility, not for crop, but to the extent of the amount of money paid for the seeds, if immediately advised. Or seeds may be returned.

VAUGHAN'S SEED STORE, Inc., gives no warranty, express or implied, as to description, quality, productiveness or any other matter of any seeds, bulbs or plants it sells, and will not be responsible for the crop; and it gives no warranty express or implied, as to fertilizers, other than in respect to analyses or other data expressly and lawfully required of the seller by statutes.

30 BULBS FOR BEGINNERS

5 each of 6 different kinds

THERE ARE two outstanding reasons why every gardener, veteran or beginner, should plant fall bulbs.

The advanced gardener knows that bulbs supply the dominant flowers for the first two months of the garden season, the time when garden beauty is most precious, and most rare.

The beginner finds that bulbs give him the surest and easiest success, of any flowers. Provided he plants quality bulbs, and follows a few simple rules, he can hardly fail to produce blossoms of the first rank.

Not even cultivation is required for this harvest. No insects will prey upon the flowers of spring bulbs, and they have no diseases to require expert treatment.

Spring-flowering bulbs prolong the garden season by a month at least. Not only that, but among them are flowers which even did they come in June, when gardens are crowded with glory, no gardener would be without.

The purchase of spring-flowering bulbs should not be considered an expense, to be charged to one garden season. It is an investment. A stock of bulbs has been known to produce flowers in the same garden for a century.

Even the labor of lifting bulbs after flowering may be dispensed with. All do excellently when left undisturbed year after year. This practice, indeed, is recommended for the daffodils. And tulips will suffer small loss if allowed to remain in a bed where they have done well, year after year.

HOW TO PLANT BULBS

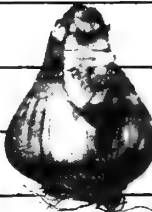

Plant all fall bulbs as soon as they can be obtained, and you are willing to disturb established beds. Daffodils and hyacinths benefit from early planting. Tulips should go in when the leaves of trees fall, so they have a season of growth before the ground freezes.

In case of necessary delay, all fall bulbs can be planted as late as the ground can be worked. A light mulch placed over the proposed planting spot will keep the frost out, if delay is unavoidable. A mulch over late planted bulbs placed after the ground is frozen, will prevent thawing and heaving.

A complete plant food applied to the soil at the rate of 5 pounds to 100 square feet, raked into the top soil after planting, will benefit the bulbs. A similar application after blooming, where bulbs are left in the ground, will help mature large bulbs for the next year's flowering.

Use no manure with bulbs, unless it has been thoroughly rotted and can be spaded into the ground several months previous to planting.

If planting with a dibber, take care that the bulb rests on the soil and is not "hung"—that is, left with a hole beneath it caused by the point of the dibber.

SIGNORA

ALL classes of roses benefit by fall planting when properly done, as it enables the plant to start growing earlier in the spring.

Planting Method: Select three or four sturdy stems and cut clean away all others, prune the selected stems back to four or five eyes. Set the plant deeply, so that the crown where the stems unite is covered and the stems rise out of the soil. When frosts begin hill soil six or seven inches high around each plant, and cover the ground about them with several inches of dry leaves, or strawy manure. In the spring, dead wood should be cut away and each stem cut back to three eyes.

Vaughan's Natural Floral Perfumes, Dram 50¢

Accepted today by women of refinement as the world's outstanding true floral perfumes, these will bear direct comparison for quality with the finest of imported odors.

In their accuracy of reproduction of the fragrance of freshly-opened flowers, they are unequalled by any now available.

We particularly invite a trial by women who are accustomed to using perfumes retailing at from two to five times the prices listed below. These prices are low because these perfumes are packed in plain crystal containers—there is no extra charge for elaborate packaging.

THE FOLLOWING ODORS ARE AVAILABLE IN EITHER COLOGNE OR PERFUME

(Cologne is about one-eighth the strength of perfumes (about double the strength of ordinary toilet water). It is used wherever a perfumed lotion is wanted—in the bath, on linens, or as a refreshing lotion in hot weather.)

Appleblossom: Soft, yet fresh and clean.

Bouquet S: A delicately feminine blend of rich floral oils that in France and America is accepted as the leading type of odor in the better shops.

Bouquet X: Another blend, slightly "drier" and less sweet. An exotic fragrance preferred by women accustomed to the better French perfumes.

Carnation: Many acknowledge it as the best recreation of this beloved old favorite.

Forest Breeze: A smoky, piney fragrance—the scent of a pine forest on an autumn day.

Frangipani: A rich, sweet odor similar to Jasmine. Loved for centuries. The red "Jasmine" of Bermuda.

Freesia: We are proud to have captured the elusive scent of this delicate flower.

Gardenia: Not sweet like so many "Gardenia" perfumes—a rich, intense odor.

Geranium: Like a crushed leaf of the green plant.

Hawaiian Lei: A lovely blend of exotic tropical flowers.

Heather: A rich "smoky" or "peaty" fragrance that goes well with sport clothes.

COLOGNE PRICES

Heliotrope: The true sweetness of the flower.

Hyacinth: The most accurate recreation of this flower we know.

Jasmine: A favorite with women of refinement for centuries.

Lavender: The well-known English type, not sweet or "musky" like so many near-lavenders.

Lemon Verbena: As lemony as the tender tips of the plant itself.

Lilac: Lilacs wet with morning dew. Fresh and leafy—our largest selling odor.

Lily of the Valley: At last, a satisfactory reproduction of this elusive scent.

Magnolia: The veritable fragrance of the Southern Magnolia—rich and lush.

New Mown Hay: The scent of Sweet Vernal Grass—like a breath of wind-swept meadows.

Nicotiana: Reproduced with astonishing fidelity. The well-known "Sweet-scented Tobacco."

Parma Violet: A favorite for generations with women of wealth and refinement.

Red Rose: The Damask Rose type.

Sandalwood: An old favorite—not too sweet.

Sweet Pea: The true fragrance of the original Spencer sweet pea.

Violet: The English violet, softer than the Parma type.

White Rose: An old favorite—not as heavy as Red Rose.

Wild Rose: Like the breeze through a Sweet Briar hedge in June.

Ylang Ylang: A highly individual version of the Jasmine type. Overlooked for half a century—today one of the most popular of floral perfumes.

VAUGHAN'S FLORAL SCENTED SOAPS

From warfare to soap seems a far cry, yet the tremendous demands for fats abroad has robbed the maker of fine imported soaps of his raw material. Because of this, women accustomed to using these fine soaps have been disappointed in the quality of recent imports.

Today we can say that Vaughan's Floral Scented Soaps are not only equal to the best imported brands, but that they surpass them, both in trueness of fragrance and in the quality of stock from which they are made. They are true super-fatted, cold-cream soaps.

They are highly fragrant—when moistened, a single cake will pleasantly perfume the air of an entire room. The odors are of the same high quality as those used in our perfumes. We invite direct comparison with soaps selling at prices from three to ten times as high as these.

ODORS AVAILABLE ARE:

Carnation: A fresh, spicy odor—liked even by men who do not ordinarily care for scented soaps.

Blue Spruce: A soft fragrance of the pine type, but without any trace of the turpentine note of many pine soaps.

Geranium: The fresh, leafy odor of an old favorite.

Jasmine: A fine recreation of the odor of this flower.

PRICES: 3 oz. cake 18c (add 3c for postage); 6 oz. cake, 35c (add 6c for postage).

Lemon Verbena: The fresh, lemony fragrance of the tender green tips of this beloved plant.

Lavender: Soap experts tell us that this is the only soap they have smelled which retains a fresh lavender character after milling. Outstanding.

Lilac: Specialists tell us that this is the only soap available today which can be compared to the Lilac formerly turned out by a famous foreign firm which was considered the best in the world. True Lilac wet with dew.

New Creations

Dram, \$1.50; Ounce, \$10.00.

We take pleasure in offering this group of highly individual, specially blended odors, which while not exactly matching the perfume of particular flowers, do express the enchanting fragrance of gardens and woodlands.

Garden Night: A rich, luxurious odor that is particularly appropriate for evening wear, especially blended for a glamorous radio star.

Morning Fresh Bouquet: A dewy, ferny fragrance, for daytime wear, which expresses springtime, youth, and beauty. It has won wide acceptance among young women of good taste.

Song of the Heart: Made from the formula compounded for the wife of one of the world's leading perfumers, this is a dry, woody fragrance with no trace of sweetness, yet definitely not heavy. A perfume of unusual distinction.

Most Beautiful of the Parrot Tulips *Tulip Fantasy*

« 12 for 75c; 100 for \$5.50, Prepaid »

WHILE resembling the Parrot type in the extraordinary size of its blossoms, and its beautifully fringed and fluted petals, Fantasy is really unique, perhaps the fore runner of a new race. It has a straight, stiff stem, which most Parrots lack, and this makes it stand up in the borders instead of hanging its head. Fantasy originated as a sport of the famous Darwin tulip Clara Butt, and perhaps its greatest charm is the clear, true pink color of its forerunner. There are many tulip fanciers who regard Clara Butt as most beautiful of all because of this color. But while Clara Butt is a relatively small Darwin, each petal of a well grown specimen of Fantasy will measure three inches long and two inches across. On the back of each petal is a marking of emerald green. A group of Fantasy in your border will be a center of interest in the tulip season and a never failing attraction to garden visitors.
